Groupe
REVOLT

Who are we?

With 12 years of expertise, the Groupe Revolt supports its clients in their energy transition. Bringing together six brands, the group aspires to become a leading player in temporary decarbonized energy both in France and internationally. Our mission is to reduce reliance on thermal generators by incorporating them into turnkey hybrid alternative energy solutions, ready for immediate deployment.

Revolt Energy Green is a reference for innovative, temporary, and decarbonized energy solutions.

Our Engineering Team designs solutions that combine performance and environmental respect for event agencies, construction professionals, telecom operators, and local authorities.

We also create tailor-made solutions adapted to your specific needs. Our experts work closely with you to design solutions that perfectly meet your technical and ecological requirements.

Our Solutions

Revolt Energy Green develops three complementary ranges of innovative solutions. The Hybrid E-Power range combines photovoltaic production with energy storage, offering a complete solution for temporary self-consumption while reducing reliance on thermal generators. The E-Power range provides mobile, modular energy storage systems designed to power installations silently and without greenhouse gas emissions.

Finally, the Solar range delivers autonomous, easy-to-deploy solar frames that ensure instant clean energy production.
